

QUALITY INSPECTION

INTRODUCTION

Our application specialize in advanced automation technologies such as surface detect inspection, OCR/OCV (Optical Character Recognition/Optical Character Verification), and critical measurements. These technologies are integrated into our specialized application, **QualityInspection**, which is designed to enhance precision and operational efficiency in various industrial processes.

OBJECTIVES This document describes the procedure for using the Quality Inspection application. Below is an overview of its basic architecture:

HARDWARE :

1.MONITOR :

Connectivity: HDMI or DisplayPort

Aspect Ratio: 16:9

Resolution:

[Full HD (1920x1080) with 100% Display Scaling] or

[4K (3840x2160) with 200% Display Scaling]

2.DESKTOP PC :

Processor: Intel or AMD

Cores: Minimum 8 Cores with Minimum 16 Logical Processors

Generations: Intel (12th Gen or Above); AMD (Ryzen5 or Above)

Integrated Graphics: Intel UHD/XeGraphics or AMD Ryzen with Radeon Graphics

SSD: 1TB; RAM: 16GB DDR4

Ethernet: Intel Gigabit Ethernet Port (I219-V or Equivalent)

USB3.0: Intel USB3.0 xHCI Compliant Host Controller Type-A

SOFTWARE:

OPERATING SYSTEM :

Windows 10 Pro or Windows 11 Pro; 64-Bit (x64)

QUALITY INSPECTION APPLICATION :

Sl	Package Name	Manufacturer
1	MVC++ 2008 SPI Redistributable Package MFC Security Update	Microsoft
2	VC++ Redistributable Packages for VS2015-2022-x64	Microsoft
3	.NET Framework 4.8 for x64	Microsoft
4	MachineVisionLibrary for x64	Supplier-Licensed
5	QualityInspection Application for x64	Supplier-Licensed

The full installation, including the operating system, will require approximately 50 GB of space on the C drive for the new PC.

APPLICATION

Click on the "**QualityInspection**" application icon located on the desktop. Once the application opens, it will start automatically. The following screen will appear for a few seconds while the required settings are loaded.

LOGIN

Rokam Technology Solutions

VERSION - 2024.10.26.0

- 1.Click the i icon to open the User Manual.

2.View the application version number in the bottom-right corner of the screen.

3.Enter your username and password on the login screen.

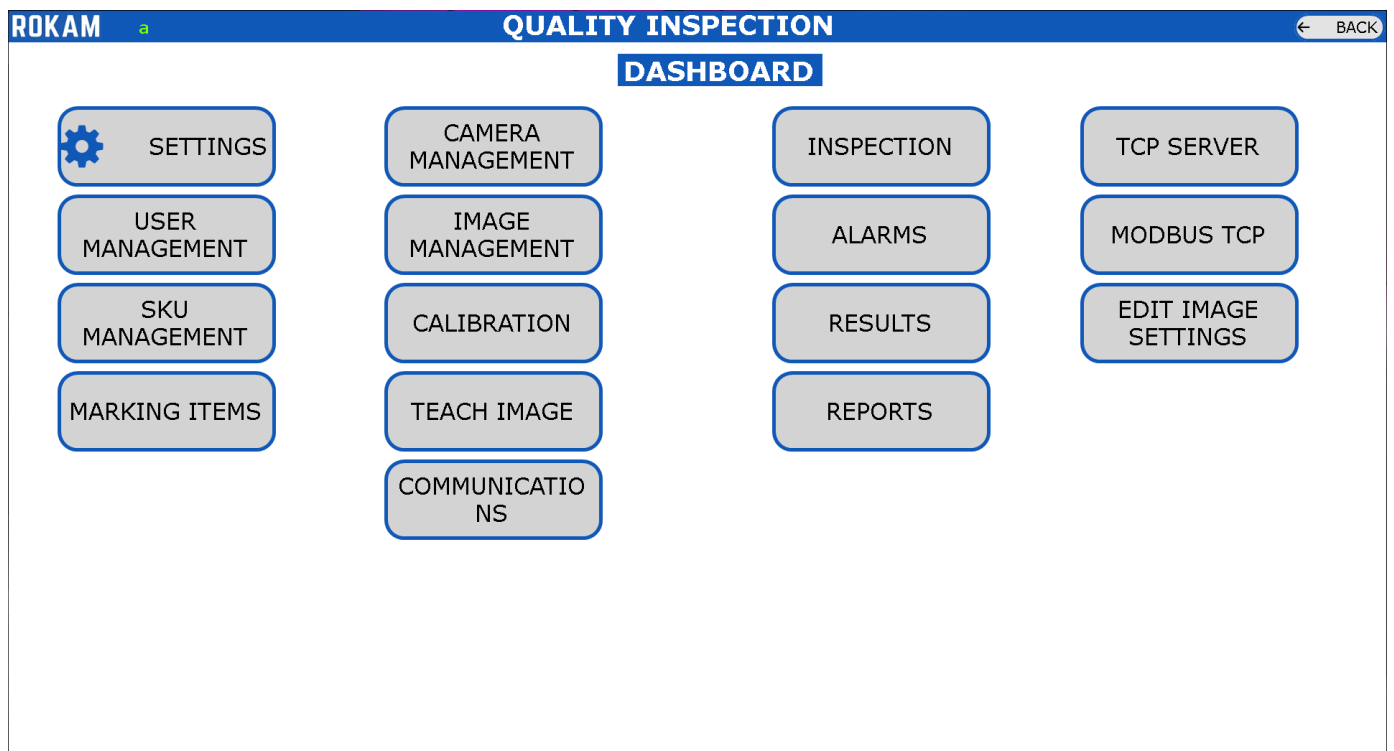

4.Click the Login button to access the application.

5.Click the Exit button to close the application.

6.Contact the administrator for a valid username and password if needed.

7.The logged-in username will appear in the top-left corner of every screen.

QUALITY INSPECTION DASHBOARD

The dashboard contains all options available in this application. Some options are accessible based on the user type, as explained in the User Management section.

Settings: All the Settings for the Application are editable.

User Management: Add/Delete/View the users for this application.

SKU Management: Add/Delete/View the SKUs for this application.

Marking Items: Add/Delete/View the Marking Items for each SKU

Camera Management: Configure the Camera for each SKU based on the requirement

Image Management: Delete/View the Images which are captured as reference by the Camera Management.

Teach Image: Edit the Inspection Parameters for each SKU

Communications: Add/Delete the communication parameters required to send inspection parameters for each SKU to the other device.

Inspection: Inspect the Components based on the configured Settings for each SKU.

Alarms: View/Export the Alarms that are logged in this Application.

Results: View the Result (PDF, Image, Individual Results) for each inspection Components

Reports: View all the Results in a Single View with Statistical Analysis.

TCP Server: Sample Application to Test and Check if the TCP Server is working properly with the TCP Client.

ModbusTCP: Sample Application to Test and Check if the ModbusTCP is working properly with the TCP Client.

Edit Image Settings: Modify the Settings for all Inspection Parameters for PASS/FAIL in single screen.

SKU MANAGEMENT

Accessible for: Administrator

You can create, delete, copy, or view an SKU.

SKU ID: This ID is used as Short-Code for SKU Name to access SKU using PLC, etc.

SKU Name: This is used as the name of the Item that has to be inspected.

The screenshot displays the 'SKU MANAGEMENT' interface within the 'ROKAM QUALITY INSPECTION' application. At the top, there's a header bar with 'ROKAM' and 'QUALITY INSPECTION' labels, and a 'BACK' button. Below the header, a form is visible with a 'SAMPLE NAME' field highlighted by a red box. To the right of this field are 'ADD' and 'COPY' buttons. Red arrows indicate the flow: one from the 'SAMPLE NAME' field to the 'ADD' button, and another from the 'COPY' button to a callout box labeled 'to copy from existing job'. The interface is divided into four main sections: 'IMAGE SETTINGS', 'COMMUNICATIONS', 'CAMERA SETTINGS', and 'MARKING ITEMS'. Each section has a 'DELETE' button. A 'REMOVE' button is also present in the top left corner of the form area.

Create: Select the SKU ID and enter the new SKU Name and click on **ADD** button. Special Characters and Existing SKU Names are not allowed to create new SKU.

Delete: Select the SKU. Click on the 'x' mark. It will prompt dialog box to accept for the deletion of the SKU. Once it is deleted, it is deleted permanently and it is not possible to recover it back.

Copy: Select the new SKU ID and Enter the New SKU Code. Select the Existing Job and Click on **COPY** Button. After Copy is completed, the newly copied Job is appeared in the list.

View: All the Settings relative for the SKU will be visible in the main screen of this SKU Management.

The Settings that are visible for every SKU are:

- Image Settings: The inspection parameters are displayed in this section.
- Communications: The values to be sent to other devices via Modbus TCP and TCP Server are displayed in this section.
- Camera Settings: The camera settings for each SKU, such as the serial number, IP address, etc., are displayed in this section.
- Marking Items: The naming conventions for the inspection parameters that have been configured are displayed in this section.

You can also delete individual settings by clicking the **DELETE** button.

MARKING ITEMS

Accessible for: **Administrator**

There are various tools available in this application for component inspection. You can configure the required tools by selecting the tool name, tool ID, and marking name.

The screenshot shows the 'MARKING ITEMS' configuration interface. It includes a 'Select Tool' dropdown, a '004' dropdown, an 'Enter Marking Name' text field, and an 'ADD' button. Below these is a table with columns 'ID', 'TYPE', 'MARKING ITEMS', and 'REMOVE'. To the right is a 'LIST OF TOOLS' dropdown menu. Five numbered blue boxes with red arrows indicate the workflow: 1. SELECT SKU NAME (points to the '031-SAMPLENAME' dropdown), 2. SELECT TOOL (points to the 'Select Tool' dropdown), 3. ENTER MARKING NAME (points to the 'Enter Marking Name' text field), 4. ADD (points to the 'ADD' button), and 5. SAVE (points to the 'SAVE' button at the top right).

ID	TYPE	MARKING ITEMS	REMOVE
001	PatternMatchMax	pmm	x
002	ColorPixelCounter	cpc	x
003	PixelCounter	pc	x

LIST OF TOOLS

- Select Tool
- Select Tool
- PatternMatchMax
- PatternMatch
- ColorFilter
- ColorPixelCounter
- PixelCounter
- CodeReader1D
- CodeReader2D
- OCRAI
- OCRMax
- CombineResults

- Select the Existing **SKU**.
- Select the Tool and Select **Marking ID**.
- Enter Marking Name and Click on **ADD** Button.
- Select all inspection parameters and add tools which are required for inspection.
- Click the **Save** button to save the inspection parameters linked to the selected SKU.
- Click on **Back** Button to go back to Dashboard Screen.
- Select "**PatternMatchMax**" as the first marking tool if you need to reference other inspection tools with pattern matching. This will ensure that the inspection tools move accordingly wherever the object moves

CAMERA MANAGEMENT

Accessible for: **Administrator**

You can select a camera from the list of available, configured cameras. Each camera should be selected and configured with the appropriate SKU. There are various tools available in this application for component inspection. Configure the required tools by selecting the tool name, tool ID, and marking name.

Steps :
1.SELECT SKU
2.SELECT CAMERA
3.SET EXPOSURE TIME AND GAIN
4.START CAMERA
5. SAVE IMAGE
6.STOP CAMERA
7. SAVE

- Select the **SKU Number**.
- Select the **Camera**.
- Click on **SAVE** button to save the Camera Settings for the Selected **SKU**.
- Click on **BACK** button to go back to the dashboard.

IMAGE MANAGEMENT

Accessible for: **Administrator**

The images saved from **Camera Management** are displayed on this screen

- Select the **SKU Number**.

- **Add Images:** You can also add images manually, though they are typically captured from Camera Management. If a camera is unavailable, offline inspection can be performed by adding images manually.
- **Delete Images:** If the saved images from the camera are not satisfactory, you can delete the image for the selected SKU
- Click the **BACK** button to return to the dashboard screen.

ROKAM a **QUALITY INSPECTION** SAVE BACK

010-S2J1MainBody
Last Modified on :

COMMUNICATION

Delimiter : ~ Count : 0

Communication String
Select the Tool Details

STRING BYTES REMOVE

Example :

```
Select the Tool Details
Select the Tool Details
SKUID
SKUCode
FinalResult
001\PixelCounter\pc\GetDuration
001\PixelCounter\pc\GetMessage
001\PixelCounter\pc\GetPixelCounter
001\PixelCounter\pc\GetResult
001\PixelCounter\pc\ID
001\PixelCounter\pc\ToolName
001\PixelCounter\pc\ToolNickName
```

- Select the SKU Number.
- Select the Communication String from the Tool using Drop-Down Box.
- Click on "+" Button to add the String to the Communication List.
- Select the Delimiter from the Drop-Down Box.
- Click on **SAVE** Button to Save the Communication String relevant to SKU.
- Click the **BACK** button to return to the dashboard screen.

For All Inspection Tools, all the result details will be available in this communication string to configure. The configured communication string will be separated using "delimiter" when the communication string is sent through the TCP Server. The configured communication string will be sent through the ModbusTCP to the respective modbus registers.

MODBUS TCP

Accessible for: **Administrator** and **Maintenance**

The screenshot displays the 'MODBUS TCP' configuration page in the ROKAM Quality Inspection application. The page is divided into several sections:

- Modbus TCP Settings:** Includes fields for 'Enable Modbus TCP' (set to false), 'IP Address' (127.0.0.1), 'Port Number' (502), and 'Start Address' (10).
- MODBUS TCP:** Features 'CONNECT' and 'DISCONNECT' buttons, and a 'Status' field.
- Write Coils:** Includes a 'TRUE' dropdown, an 'ADD +' button, and buttons for 'WRITE MULTIPLE COILS', 'COIL REMOVE', and 'COILS'.
- Read Coils:** Includes a 'No. of Values' field (20) and buttons for 'READ MULTIPLE COILS' and 'COILS'.
- Write Registers:** Includes a '1000' value field, an 'ADD +' button, and buttons for 'WRITE MULTIPLE REGISTERS', 'REGISTER REMOVE', and 'REGISTERS'.
- Read Registers:** Includes a 'No. of Values' field (20) and buttons for 'READ MULTIPLE REGISTERS' and 'REGISTERS'.
- CONFIGURE MODBUS TCP REGISTERS (0-19):** A table listing pre-configured registers: COMMUNICATION (0), SKUID (1), SKUID_FEEDBACK (2), TRIGGER (3), TRIGGER_FEEDBACK (4), CAMERA_STATUS (5), and RESULT (6).

A red arrow points from the 'CONNECT' button in the 'MODBUS TCP' section to the 'CONNECT' button in the 'Write Registers' section. A note at the bottom states: 'NOTE : Make sure to save the settings before going back.'

- Select the **ModbusTCP** option, and the application will act as the Modbus TCP client, while the PLC will act as the Modbus TCP server.
 - The IP address, port number, start address, and multiplication factor (for digital values) will be configured in the settings.
 - The heartbeat interval for the Quality Inspection application to monitor the Modbus TCP register for read/write operations is 30 milliseconds.
- Handshaking of Registers between the PLC and ModbusTCP in the Quality Inspection Application is explained below.

CONFIGURE MODBUS TCP REGISTERS (0-9)

COMMUNICATION	0
SKUID	1
SKUID_FEEDBACK	2
TRIGGER	3
TRIGGER_FEEDBACK	4
CAMERA_STATUS	5
RESULT	6

The standard Modbus registers are pre-configured with their register locations, but these locations can be reconfigured. This option is accessible only to administrators.

COMMUNICATION: This is used to establish a heartbeat communication between the Quality Inspection application and the PLC. Every 5 seconds, the application writes a register value of '1', and the PLC checks if the value is '1'. If the value is not '1' within the heartbeat period, the PLC will detect a communication issue. The PLC will then write a register value of '2'.

SKUID: To select an SKU from the PLC, the PLC will write the SKU ID to the SKUID register location. Refer to SKU Management to find the SKUID for each SKU.

SKUID_FEEDBACK: The application will monitor the SKUID, and if a valid SKUID is read from the SKUID register location, the respective SKU will be loaded into the application (all camera and inspection parameters will be loaded and ready for inspection). Once the SKU is successfully loaded, the application will write the same SKUID value to the SKUID_FEEDBACK register. When the PLC reads this value, it will

reset the register to '0'.

Example : The PLC will send the value '5' to the SKUID register. The application will then look for and load the SKU with SKUID '5'. Upon successful loading of the SKU, the value '5' will be sent back to the SKUID_FEEDBACK register location.

TRIGGER: To start the inspection of an object, the PLC will write the value '1' to the TRIGGER register location.

TRIGGER_FEEDBACK: Once the application reads the TRIGGER register with the value '1', the TRIGGER register will be reset to '0', and the TRIGGER_FEEDBACK register will be written with '1'. The PLC will receive the TRIGGER_FEEDBACK and reset its value to '0'.

CAMERA_STATUS: The application will write the value to the CAMERA_STATUS register. The PLC will monitor this status and perform the process steps according to its automation cycle.

```
Register Value as 3 => if the inspection is in progress.  
Register Value as 2 => ready to take the trigger  
Register Value as 0 => camera is not yet ready
```

RESULT: The application will write the value to the RESULT register. The PLC will monitor this result and perform the process steps according to its automation cycle.

```
Register Value as 2 => if the Result is FAIL.  
Register Value as 1 => if the Result is PASS.  
Register Value as 0 => if the Result is Not Yet Ready.
```

Location of MODBUS Registers:

Register Location: Start Address [Refer Settings] + Register Location

REGISTER NAME	REGISTER LOCATION
COMMUNICATION	0(configurable between 0-19)
SKUID	1(configurable between 0-19)
SKUID_FEEDBACK	2(configurable between 0-19)
TRIGGER	3(configurable between 0-19)
TRIGGER_FEEDBACK	4(configurable between 0-19)
CAMERA_STATUS	10(configurable between 0-19)
RESULT	11(configurable between 0-19)

CUSTOM-REGISTER NAME	REGISTER LOCATION
String1 Configured in Communication	20
String2 Configured in Communication	21
String3 Configured in Communication	22
String4 Configured in Communication	23
String5 Configured in Communication	24
String6Configured in Communication	25
...	..
...	..

To simulate Modbus TCP, you can use the Modbus Simulator application, which can be downloaded from the internet.

Select the **TCP Server** option, and the application will act as a TCP server, while the PLC will act as a TCP client. The following are the TCP server commands used to control the application in the inspection screen:

- (1) **Reset the Job** Syntax: SKU_RESET Response: SUCCESS or FAILURE
- (2) **Get the List of Jobs Available** Syntax: SKU_LIST Response: Provides a list of jobs, separated by commas.
- (3) **Select the Job** – 3 Ways to Load Job Syntax: SKUCODE_jobName Example: SKUCODE_newjob1 Response: SUCCESS or FAILURE

Syntax: SKUID jobId
Example: SKUID 001
Response: SUCCESS or FAILURE

Syntax: SKUIDCODE jobId-jobName
Example: SKUIDCODE 001-newjob1
Response: SUCCESS or FAILURE
Action: The Application will load the respective SKU Settings to the inspection.

- (4) **Trigger Image** Syntax: TRIGGER_filename Example: TRIGGER_range-image_00001 Response: Data which is configured in Communications

- (5) **Trigger Camera** Syntax: TRIGGER Response: Data which is configured in Communications

To simulate a TCP client, you can use the **Hercules** application, which can be downloaded from the internet.

INSPECTION

Accessible for: **Administrator**, **Maintenance** and **Operator**.

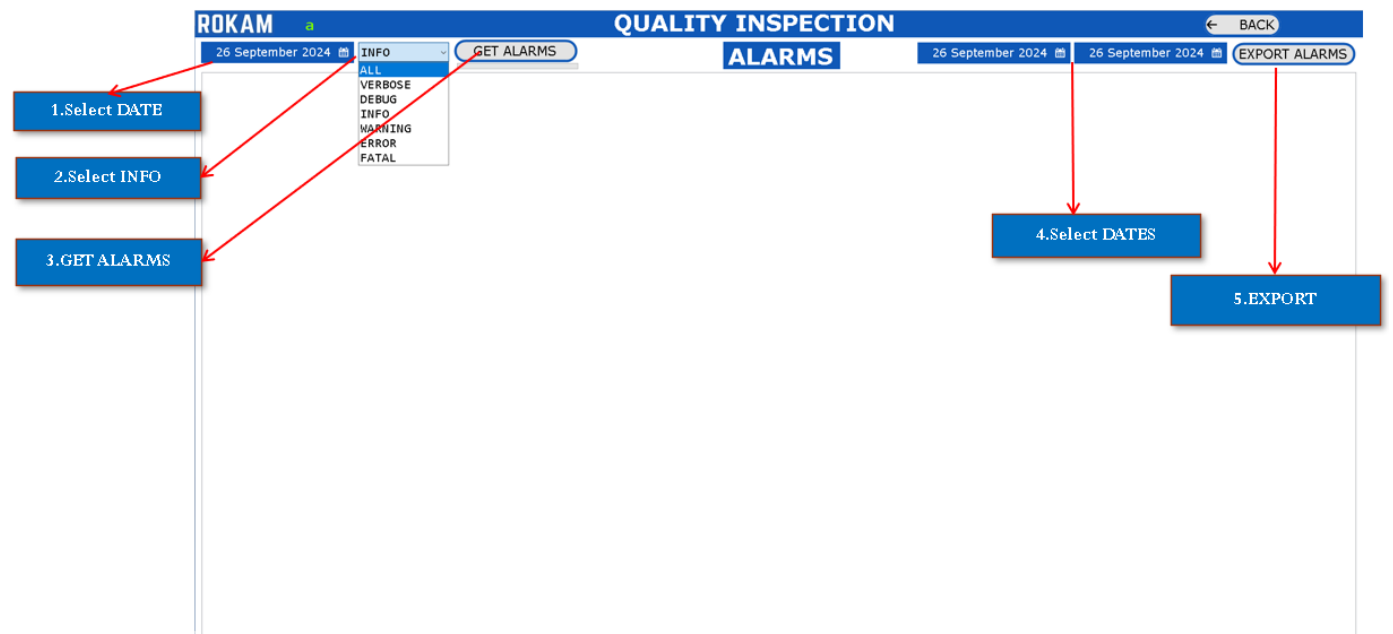

- Select the **SKU number** manually, or wait for the PLC to automatically select it through ModbusTCP communication.
- The settings linked to the selected SKU will be loaded into the application
- **Administrator/Maintenance:** Will have an option to manually load the image to inspect the image.
- **Operator:** Must wait for the PLC to trigger the camera through ModbusTCP.
- Once the image is ready, the inspection will occur automatically and update the following:

- o A new image with graphics will appear in the center of the screen.
- o The inspection results for all tools will be updated in the tree view on the right side of the screen.
- o The PASS/FAIL counter will be updated at the bottom right of the screen.
- o The trigger number and cycle time details will be updated at the bottom right of the screen.
- o A message to the operator about the application status will be displayed at the top center of the screen.

ALARMS

Accessible for: **Administrator**, **Maintenance** and **Operator**.

Alarms will display all log information for the application.

- Select Date and Select Type of Alarm
- Click on **GET ALARMS** Button.
- To export alarms, select the start date and end date, then click the Export Alarms button. The alarm data will be exported to the '**Data Location**' folder.
- Click the **BACK** Button to return to the Dashboard.

RESULTS

Accessible for: **Administrator**, **Maintenance** and **Operator**.

The screenshot shows the 'ROKAM QUALITY INSPECTION RESULTS' interface. On the left, five blue callout boxes with red arrows point to specific UI elements: '1.Select SKU' points to the 'Select SKU Number' dropdown; '2.Select DATE' points to the date field showing '26 September 2024'; '3.Select GET RESULTS' points to the 'GET RESULTS' button; '4.Select TRIGGER' points to the 'TRIGGER' column header in the table; and 'Only ADMIN' points to the 'Only ADMIN' label. The interface includes a 'CLEAR RESULTS' button, a 'RESULTS' tab, a 'PDF' icon, and a 'BACK' button. A table with columns 'ID', 'TRIGGER', 'TIME', and 'DELETE' is visible, along with a 'PARAMETER' and 'VALUE' section at the bottom.

- Select the **SKU Number**.
- Select the **Date**.
- Click on **GET RESULTS** Button.
- The Results will be Displayed in the List.
- Click on the trigger number to view the result of the inspected object.
- Click on **PDF ICON** to see the PDF report of the Inspection.
- Expand the Tree View to View the Full Inspection details of the inspected object.
- The graphic image will be displayed in the center of the screen.
- The metadata information about the inspected object is available at the bottom left corner of the screen.
- Click the **BACK** Button to return to the Dashboard.

REPORTS

Accessible for: **Administrator**, **Maintenance** and **Operator**.

The screenshot shows the 'ROKAM QUALITY INSPECTION' interface. On the left, there are five numbered blue callout boxes with red arrows pointing to specific UI elements: 1. '1.Select SKU' points to the 'All SKUs' dropdown. 2. '2.Select DATES' points to the date range filters. 3. '3.Select USERS' points to the 'All Users' dropdown. 4. '4.Select PASS/FAIL' points to the 'ALL' dropdown for results. 5. '5.GET REPORTS' points to the 'GET REPORTS' button. The interface includes a table with columns: ID, SKU, DATE, TIME, TRIGGER, USERNAME, and RESULT. On the right, there are sections for 'REPORTS' with a table for 'TOTAL PASS FAIL', a 'GET IN PDF FORM' button with a PDF icon, a 'FAILED COUNT' table, and a 'STATISTICS VALUE' section.

- Select the **SKU Number**.
- Select the **Start Date** and **End Date**.
- Select the **User Name**
- Select the Result **PASS/FAIL/ALL**.
- Click on **GET REPORTS** Button.
- The total, pass, and fail counts will be displayed in a table and also shown in a pie chart.
- The Failed Details will be shown in Table.
- The results of all inspection details will be updated in the list.
- Click the **EXPORT** button to export the list of all inspection details to a CSV file in the Data Location folder.
- Click on the **Trigger number** to view the result of the inspected object.
- Click on the **PDF icon** to view the PDF report of the inspection.
- Click on **BACK** Button to return to the Dashboard.
- Select the trigger details to view the history of all inspection results in graph form.

EDIT IMAGE SETTINGS

Accessible for: **Administrator** and **Maintenance**

- Select the **SKU Number**.
- Click on **LOAD SETTINGS** Button.
- Click to edit the “MIN VALUE NEW” and “MAX VALUE NEW” for each inspection tool name. These Values will decide for PASS or FAIL for the Inspection Result for individual tool.
- View the “MIN VALUE OLD” and “MAX VALUE OLD” to view existing settings value.
- Click on **SAVE** button to save the Image Settings.
- Click on **BACK** button to return to the Dashboard.

MAINTENANCE and TROUBLESHOOTING

Maintenance :

- The inspection results are stored in the 'Data Location' folder. Please ensure that at least 25% of free space is always available on the respective drive.
- If less than 5% of free space is available on the application installation drive (ideally the C drive) or on the 'Data Location' folder drive, the application will not open.

TROUBLESHOOTING :

- There are three types of messages that will appear in a dialog box.
- Information, Warning and Error
- When an error occurs, delete the SKU with the error through SKU Management and create a new SKU for it.
- Please read the camera user manual carefully for troubleshooting instructions.
